

FSI

Fire & Safety Industries (FSI) is an independent Australian owned company formed in 1991, servicing customers throughout the world including Australia and South-East Asia (Indonesia, Laos, Papua New Guinea, Philippines, Singapore, Thailand & Vietnam), as well as Africa, China, Hong Kong, India, Japan, New Zealand, Mongolia and South America.

FSI has a solid reputation, an impressive level of expertise and is a leader in system and field technology. There are currently over 10,000 FSI systems in service throughout the Asia Pacific region.

Our Team

The FSI head office is located in Brisbane, Australia. The Company has branch offices in Mackay, Blackwater and Gunnedah along with a national and worldwide distributor network. FSI has a dedicated team of field technicians who can install, service or perform system training anywhere within Australia or the world.

Our mobile technicians are supported by a highly qualified team of professionals at head office who can design, build and dispatch FSI systems promptly to any location in Australia or the world.

Our Product

The Foam-Guard Automatic Fire Suppression System is fully accredited by ActivFire and complies with Australian Standard 5062. It has been developed through constant research and in-service field trials to achieve arguably the most advanced A.F.F.F. Fire Suppression system on the market today.

This system was developed by FSI after significant consultation with industry, machinery manufacturers and contractors. The FSI system can be configured to suit all applications such as mining, forestry, construction, transportation, marine, or manufacturing industries.

The setup of the FSI system starts with customer consultation and a thorough risk assessment analysis. Each application is individually assessed to identify all fuel and ignition sources and then the FSI system is designed and installed to ensure optimum coverage of all risk areas.

All installations include 24 hour support and are available with full service and maintenance plans from FSI.

The most advanced A.F.F.F. Fire Suppression system on the market today

The Benefits

-  Available in fully customisable LOP & ROP configurations
-  Fully customisable; external inputs, pressure monitoring, special application
-  Fully self contained - requires no external power for standard operation
-  Uses A.F.F.F. as the extinguishing medium
-  Can be fitted to any type of machine or stand alone application
-  Self retained blow off caps ensure nozzles are free from debris
-  High quality means low maintenance and assured availability when needed
-  System design ensures ease of installation and replacement of parts
-  Easily recharged on site
-  Totally proven and reliable system
-  Flexible hoses allow increased durability to vibration compared to tubing systems

Vehicle Fire

Vehicles by their nature pose a high risk due to the fact that they carry a combination of flammable liquids such as fuel and hydraulic oils. Introduce an ignition source from a turbo, electrical fault or external factor and the potential is there for a major fire. This would result in considerable loss of property, production and possible personal injury.

Other Products

FSI offers an extensive range of products for all applications.

-  Mining
-  Construction
-  Electrical
-  Vehicle
-  Drilling
-  Generator Sets
-  Industrial
-  Gaseous Systems

YOUR COMPLETE FIRE FIGHTING AND SERVICE SOLUTION

“With a team of highly trained and qualified field technicians, available 24 hours a day, alongside our vast national and worldwide distributor network you can rest assured you are backed by the best in the business.”
